This course: http://www.mimuw.edu.pl/~tarlecki/teaching/ct/

• Algebras, homomorphisms, equations: basic definitions and results

- Algebras, homomorphisms, equations: basic definitions and results
- Categories; examples and simple categorical definitions
- Limits and colimits
- Functors and natural transformations
- Adjunctions

- Algebras, homomorphisms, equations: basic definitions and results
- Categories; examples and simple categorical definitions
- Limits and colimits
- Functors and natural transformations
- Adjunctions
- Cartesian closed categories
- Monads

- Algebras, homomorphisms, equations: basic definitions and results
- Categories; examples and simple categorical definitions
- Limits and colimits
- Functors and natural transformations
- Adjunctions
- Cartesian closed categories
- Monads
- Institutions (abstract model theory, abstract specification theory)

- Monads
- Institutions (abstract model theory, abstract specification theory)

BUT: Tell me what you want to learn!

Literature

Plenty of standard textbooks

But this will be roughly based on:

D.T. Sannella, A. Tarlecki.

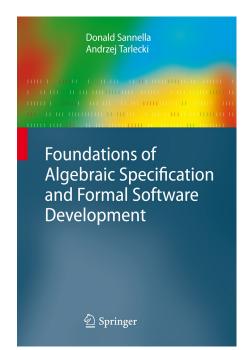

Foundations of Algebraic Specifications and Formal Program Development.

Springer, 2012.

Chap. 1: Universal algebra

Chap. 2: Simple equational specifications

Chap. 3: Category theory

One motivation

Software systems (modules, programs, databases...):

sets of data with operations on them

- Disregarding: code, efficiency, robustness, reliability, ...
- Focusing on: CORRECTNESS

One motivation

Software systems (modules, programs, databases...):

sets of data with operations on them

- Disregarding: code, efficiency, robustness, reliability, . . .
- Focusing on: CORRECTNESS

Universal algebra from rough analogy

module interface → signature module → algebra

module specification → class of algebras

One motivation

Software systems (modules, programs, databases...):

sets of data with operations on them

- Disregarding: code, efficiency, robustness, reliability, . . .
- Focusing on: CORRECTNESS

Universal algebra from rough analogy

module interface → signature

module → algebra

module specification → class of algebras

Category theory

A language to further abstract away from the standard notions of universal algebra, to deal with their numerous variants needed in foundations of computer science.
